The base material of our work are metal plates with traces of use, for which we both have passion. Amazed of how different colors and treatments work on it, we started to experiment.

Exciting to see what came out of it. In addition to grinding and filling techniques, acrylic and oil paints and, for example, silver leaf are used.

The individual panels are unique because of their own structure, color and material thickness – UNIKATE – which evoke different emotions and impressions for each observer.

Our unique pieces characterise rooms, through the used look the lightness of the imperfect. Natural influences are changing some of our work, ripening, deliberately applying rust and continuing to evolve.

You have the opportunity to personalize your image: wedding date, birthday date, individual passion – for example an instrument – company logo, other sizes or colors – whatever you want!
